

Kenneth Emata

Surrey, BC | kea31@sfu.ca | (604) 781-0796 | [LinkedIn](#)

SKILLS

- **Languages:** C/C++, Rust, Java, Python, JavaScript, SQL, R, Bash
- **Tools & Platforms:** Git/GitHub, Docker, VS Code, Linux, MATLAB, NeoVim, MS Office, Google

WORK EXPERIENCE

STEMA Learning | Classroom Facilitator/Curriculum Developer **June 2025 - Present**

- Designed and delivered technical curriculum for 30+ students ages 4–13, translating programming and engineering fundamentals into structured, age-appropriate lessons.
- Built programming modules in Python, JavaScript, HTML/CSS, and Scratch covering core concepts including loops, conditional logic, and variables.
- Engineered hands-on engineering lessons using U20 Pro and VEX GO kits, focusing on mechanical assembly, structural stability, and sensor integration
- Oversaw technical operations including hardware maintenance, software configuration, and classroom equipment logistics across multiple sessions.

SOFTWARE PROJECTS

Turtle Trips: AI-Powered Travel Planner **October 2025**

Technologies: Flask, Python, HTML/CSS, Javascript, Git/Github, Gemini API

- Developed a generative AI planner that converts natural language prompts into comprehensive multi-day itineraries covering dining, lodging, and activities.
- Architected a Flask backend to orchestrate Gemini API prompts and process complex data transformations for seamless itinerary generation.
- Built an interactive mapping interface utilizing Google Maps/Places APIs to visualize waypoints, calculate route distances, and optimize travel paths.
- Streamlined geolocation and venue discovery API integrations, delivering high-fidelity, real-time location data to users.
- Led version control and code review workflows for a 4-person team throughout the hackathon, maintaining a clean GitHub history.

MarketMimic: Web-based Stock Market Simulator **July 2025**

Technologies: HTML/CSS, JavaScript, Java, Spring, Git/Github, Docker

- Built a secure backend featuring JWT-based authentication, role-based access control, and robust session management.
- Integrated live data streaming via WebSockets to provide users with real-time stock price updates and low-latency trading simulations.
- Developed RESTful APIs to manage complex operations including portfolio tracking, historical data analysis, and trade execution.
- Implemented server-side logic for trade validation, pending order queues, and automated market-status alerts.
- Collaborated in an Agile team of 4, utilizing user stories and velocity tracking to ensure iterative delivery across 2-week sprints.

EDUCATION

Simon Fraser University **Expected: June 2027**

Bachelor of Science in Computing Science *Burnaby, BC*

- **Relevant Coursework:** Data Structures, Artificial Intelligence, Software Engineering, Computer Architecture, Systems Programming, Cybersecurity, Databases, Networking
